RAPHA PLAN - for the optimal piece arrangement on the press-shuttle

... for more
PRODUCTIVITY.

RAPHA PLAN is new software and has been developed especially for the 3D-Thermoforming branch.

Several presses and foils need different setting-possibilities. RAPHA PLAN offers these possibilities on a simple and perspicuous kind. The optimization-results will be shown by a graphic account - e.g. printed according the several foils types. Through an open interface you import the orders by pressing a button.

If you would like to sum up several orders to one collective order, it's no problem for RAPHA PLAN.

If you would like to manage the press-parameter centrally, it's no problem for RAPHA PLAN.

If you would like to know the cost of the foil from one order, it's no problem for RAPHA PLAN.

One MOUSE-CLICK and RAPHA PLAN calculates non-useable foil, total consumption and the costs.

All in all RAPHA PLAN is not only branch-specific, optimisation software but also RAPHA PLAN offers solutions for calculations, materials management and work scheduling.

PERFORMANCES

- Variable setting-possibilities of margin and interstice
- Tolerance dimension and correction dimension offers enlarged setting- possibilities particularly also for special foils (e.g. mirror finish, thicker and thinner foils, "problem foils")
- Collective orders
- Parameter administration
- Material administration
- Open interface for your internal software
- Network capable Multi-user license and single-user license capable
